SUMMARY

Software Engineer with hands-on experience building backend and full-stack web applications using Python, FastAPI, and Django. Skilled in designing REST APIs, relational data models, authentication systems, and asynchronous processing pipelines. Proven track record of optimizing database performance, improving execution speed, and delivering scalable, well-tested applications in production environments.

SKILLS

Languages: Python, JavaScript, SQL

Backend Development: FastAPI, Django, REST API Design, SQLAlchemy, Celery

Frontend Development: React, HTML5, CSS3, Bootstrap

Databases: MySQL, SQLite

Tools & Platforms: Git, GitHub, Docker, Figma

PROFESSIONAL EXPERIENCE

Software Engineer — Infinite Open Source Solutions LLP

Feb 2025 – Present

Kozhikode, Kerala

- Designed and built secure, high-performance REST APIs in Python and FastAPI, enabling scalable backend functionality for production applications.
- Engineered a configurable, rule-based financial calculation engine to automate multi-level qualification, eligibility, and validation workflows, reducing manual processing effort across business logic layers.
- Reduced query execution time on high-volume transactional MySQL databases by optimizing SQLAlchemy data models, complex SQL queries, and recursive query structures.
- Guaranteed data integrity and calculation accuracy by implementing transaction-safe database operations, structured validation, and exception-handling protocols.
- Increased processing efficiency for recurring and large-scale data jobs by introducing Celery-based asynchronous and scheduled task processing.
- Maintained system reliability across development and production environments by managing Dockerized services and leading root-cause analysis of concurrency, performance, and data-integrity issues.

Python Full Stack Intern — Softroniics

Jun 2024 – Feb 2025

- Developed full-stack web applications using Django (MVT architecture) and MySQL, paired with responsive React and Bootstrap frontends.
- Delivered complete CRUD functionality by implementing secure server-side validation, authentication, and session management.
- Improved application performance and code quality by refactoring queries, debugging production issues, and collaborating through Git-based code reviews.

PROJECTS

AI Document Search — Python/FastAPI, React 19, Pinecone, PostgreSQL, Gemini API

- Built a full-stack retrieval-augmented generation (RAG) chatbot that ingests PDF, DOCX, XLSX, CSV, HTML and other formats, chunks and embeds them, and answers user questions grounded in the retrieved passages with page-level citations.
- Designed the backend on Clean Architecture with swappable provider interfaces for embeddings, chat models and vector stores (local BGE/Ollama for development, Gemini + Pinecone in production), backed by unit and integration tests.
- Implemented JWT authentication with Argon2id password hashing, per-user document ownership and a guest-access mode; deployed the API to Render (Alembic migrations, Supabase Postgres) and the Vite/Tailwind frontend as a separate SPA.

Alora Events — Event & Hall Booking Platform

- Built a full-stack event and hall booking platform using Python and Django, featuring role-based dashboards, automated double-booking conflict validation, and OTP-based password recovery.
- Enhanced data management and usability by implementing CRUD operations, server-side form validation, and pagination.

EDUCATION

B.Sc. Computer Science — University of Calicut

Jun 2021 – Apr 2024

CERTIFICATIONS

- Claude 101 — Anthropic, Certificate of Completion, 2026
- Introduction to Large Language Models — Google Cloud & Simplilearn SkillUp, 2026
