SUMMARY

Software engineer building backend and full-stack applications with Python, FastAPI, and Django. Experienced in designing REST APIs, data models, and authentication, and in shipping scalable, well-tested web applications.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL
Backend	FastAPI, Django, REST APIs, SQLAlchemy, Celery
Frontend	React, HTML5, CSS3, Bootstrap
Databases	MySQL, SQLite
Tools	Git, GitHub, Docker, Figma

EXPERIENCE

Software Engineer — Infinite Open Source Solutions LLP Feb 2025 – Present · Kozhikode, Kerala

- Design and build secure, high-performance REST APIs in Python/FastAPI for scalable backend applications.
- Engineered a configurable, rule-based financial calculation engine handling multi-level business logic with automated qualification, eligibility, and validation workflows.
- Optimized SQLAlchemy data models, complex SQL, and recursive queries over high-volume transactional MySQL data, significantly reducing execution time.
- Implemented transaction-safe database operations, validation, and exception handling to guarantee data integrity and calculation accuracy.
- Introduced Celery-based asynchronous and scheduled processing for recurring operations and large-scale data jobs.
- Manage Dockerized services across development and production; lead root-cause analysis of concurrency, performance, and data-integrity issues.

Python Full Stack Intern — Softroniics Jun 2024 – Feb 2025

- Built full-stack web applications with Django (MVT) and MySQL, with responsive React/Bootstrap frontends.
- Implemented complete CRUD features with secure server-side validation, authentication, and session management.
- Improved performance through query optimization, refactoring, and debugging; collaborated via Git and code reviews.

PROJECT

Identity Theft Detection System — Django/MySQL web application applying facial-recognition concepts to detect identity theft and support cyberbullying prevention.

EDUCATION

B.Sc. Computer Science — University of Calicut

Jun 2021 – Apr 2024
